

EASY JUST GOT EASIER WITH OUR LATEST SOFTWARE RELEASE

Introducing Easy Dental 12.0 practice management software

With Easy Dental 12.0, you don't have to be a software wizard to bring an easier-to-use, more cost-efficient system to your practice. New features help you and your team focus on what matters most: patients and profitability.

- **Easy just got easier with this streamlined system.** It's simple to learn and cuts time getting up to speed.
- **Smart just got smarter with the improved patient banner.** Access intuitive new patient tools such as "Related Patients" and "Quick Search."
- **Smooth just got smoother with system enhancements.** Expect more office efficiency with setting buttons in all modules, customizable toolbars and more.

The New Patient Banner

Boost the day-to-day operations of your practice. The new patient banner gives you and your team easier, faster access to key patient information at a glance. It's located at the top of the page in any module where you've selected a patient. The quick-view data includes: **Age, Gender, Birthday, and Phone number.**

Patient Insurance Information

Now you can see the patient's primary and secondary insurance plans at a glance in the new patient banner. Patients appreciate a well-run practice and having this information handy will help you give quicker answers to their insurance questions.

Patient Providers

The patient's primary provider is now readily displayed alongside names of their insurance plans.

Related Patients

Put related patients' information at your fingertips. When viewing a patient in the Patient Banner, a down arrow on the name alerts you that this patient has related patients. You can click on the patient's name to see a drop-down list of related members. When you select a name from that list, Easy Dental switches to the related member's record. This lets you review other related members who may also be due for office visits or check on their billing status. Steps saved!

Patient Quick Search

Quick just got quicker! While on the patient banner, you can click in the new search box to find a patient fast. Type any portion of the patient's name and you'll see potential matches. When you see the name you need, click on it and that patient becomes the current selected patient. This can shorten hold times for patients on the phone and for patients while checking in — and help make your office more efficient overall.

“I’ve been beta testing upgrades of Easy Dental for the last 5 to 6 years. My recent testing was with Easy Dental 12 beta, which will update the existing version of Easy Dental 11.4. The Easy Dental 12 beta has the most significant and impressive enhancements compared to any of the past Easy Dental upgrades. I’m very impressed and genuinely endorse and recommend this upgrade to my professional colleagues.”

STEVEN B. SCHLETTY, DDS

EASY DENTAL 12.0 FEATURES UPDATED SYSTEM FUNCTIONS

Designed for a smoother user experience for you and your staff

Settings Buttons

Now you can see “Setting” buttons from any module. It’s easier and faster to adjust Easy Dental settings.

Module Toolbar Enhancements

You can now accommodate the different viewing needs of your team. The enhanced Easy Dental module toolbar features icons that can be resized and displayed with or without labels, so you and your staff can tailor the interface to your unique preferences. It also allows users to reorganize the buttons or resize the entire bar by clicking and dragging. Once the toolbar looks the way you want it, you can lock it for that workstation to prevent accidental changes.

DPI Scaling

DPI stands for “dots per inch” and it measures your screen’s resolution. If you use Windows 8.1 or higher, you’ll benefit from the Easy Dental 12.0 DPI scaling feature. It especially improves viewing on high-resolution monitors because the interface adjusts automatically to display as it was originally designed. You’ll have an enlarge view of key screens. The new DPI scaling provides additional clarity and convenience for your practice.

Customizable Settings for Dexis Users

Choose where Dexis pops up in your modules. This update gives you access to Dexis in the modules you use most.
